SUMMARY

AI-native with 5+ years building at the intersection of product thinking, GenAI, and operational execution. At NxtWave (EdTech, \$234M valuation), architected the Agentic AI pipeline — cutting production time by 87.5% — and scaled a zero-to-one team to 20 while growing the core assessment library 23×. Thrives in early-stage environments where the brief is ambiguous, the team is lean, and someone needs to simultaneously hold the roadmap, talk to engineers, and ship. Built to be the bridge between what AI can do and what the business actually needs. CAT 85th percentile · ICET top 1% — competitive instincts.

PROFESSIONAL EXPERIENCE

Project Manager — NxtWave Technologies (Series A, \$33M) Jan 2023 – Present

Reporting directly to VP / Co-founder

- Grew the technical assessment library by 23× — from an initial base to 70,000+ units — and expanded question-variant types from 3 to 9, converting a chronic content bottleneck into a scalable, error-free pool.
- Managed the full program backlog across 5 service lines — owning intake, prioritisation, go-live scheduling, and stakeholder sign-off for every release cycle.
- Operated as the cross-functional hub across Corporate Relations, Product, Curriculum teams — translating ambiguous client requirements into delivery specs.
- Architected and shipped the company's Agentic AI production pipeline — reduced content production time by 87.5% on covered workflows, compressing what previously took days into hours.
- Directed ideation and rollout of 23+ internal automation tools targeting specific operational bottlenecks — reduced per-unit production cost by ~80% and scaled annual output by over 5× in a single fiscal year.
- Built the content team from zero to 12 (peak 20) across 6 technical domains — owned hiring end-to-end, designed onboarding to production independence, and upskilled every team member into AI-native workflows.
- Designed the team's unit-economics framework from scratch — introduced cost-per-unit and per-contributor productivity KPIs that became the direct basis for VP-reviewed compensation and headcount decisions.
- Represented operations in 4 platform feature scope reviews — ran version-tracked feedback loops across dev iterations.

Systems Engineer — Infosys Limited

Sep 2018 – Sep 2020

Java development training & enterprise Agile delivery.

- Completed Infosys' intensive 6-month Java development training at Mysore — built hands-on proficiency in Core Java, OOP, and Spring Boot through structured coursework and live coding assessments.
- Contributed to two separate client projects as part of Agile/Scrum teams — participated in sprint planning, worked assigned story points, and completed feature delivery tasks within sprint cadences.
- Authored knowledge-transfer documentation for 15+ modules, cutting new-joiner onboarding time by ~30% and establishing the documentation standard adopted across the project.

BREAK

Self-directed study & national competitive examinations

Sep 2020 – Dec 2022

- Voluntarily stepped away from the corporate track to compete in India's most selective national examinations — CAT 2020 (85th percentile, QA) · ICET Rank 349 / ~40,000 (top 1%) · APPSC Group I Prelims: cleared · UPSC Prelims: appeared.

Skills

Technical Skills: Python · SQL · REST APIs · AWS S3 · JSON/CSV pipelines · Git · Java · Spring Boot & microservices · HTML/CSS/JavaScript (review-level) · Prompt Engineering · RAG pipelines · Agentic workflow design · LLM evaluation & guardrails · LangChain · LlamaIndex · Context & harness engineering · OpenAI API · Google Apps Script · Selenium automation.

Managerial Skills: Roadmap & lifecycle ownership · Backlog prioritisation · KPI & unit-economics design · Stakeholder requirement translation · Cross-functional consensus building · Agile/Scrum delivery · Team building & performance management · Executive reporting · Cost-per-unit modelling · Content effectiveness tracking.

EDUCATION

B.Tech, Mechanical Engineering — MVGR College of Engineering · First Class with Distinction

2014 – 2018
